

EDUCATION

- Zhejiang University** Hangzhou, Zhejiang, China
Bachelor of Science in Physics 2019.09 - 2023.06
-Overall GPA: 3.87/4.0(87.74/100); The third year GPA: 3.96/4.0(90.08/100); GPA Ranking: 7/67
- École Normale Supérieure (ENS) - PSL** Paris, France
Master in the International Centre for Fundamental Physics (ICFP) 2023.09 - 2025.08
-Overall GPA: 16.5/20 (M1), 15.2/20 (M2)
- École Supérieure de Physique et de Chimie Industrielles - PSL** Paris, France
PhD in Physics; Supervisor: Ludovic Berthier, Camille Scalliet (ENS) 2025.10 - so far

RESEARCH EXPERIENCE

- Zhejiang University** Institute of Condensed Matter Physics
Intern, Advisor: Prof. Jing-Yuan Li 2021.03 - 2023.09
 - **Topic:** Link Node: a method to characterize the chain topology of intrinsically disordered proteins (IDPs) (*Lang et al. Quantitative Biology (2025)*)
 - * Performed All-atom Molecular Dynamic simulations to sample the configurations of IDPs.
 - * Characterized the chain topology of IDPs by *Link Node*, a specific structure that related to the slow dynamics.
- École Supérieure de Physique et de Chimie Industrielles** Gulliver laboratory
Intern, Advisor: Prof. Paddy Royall & Dr. Camille Scalliet (ENS) 2024.02 - 2024.06
 - **Topic:** Relaxations in glass-forming systems: the anti-correlation between excitations and locally-favored structures (*Lang et al, PRE (2025) - Editors' Suggestion*)
 - * Performed Molecular Dynamic simulations on Kob-Anderson mixtures to investigate the relaxation mechanism in super-cooling liquids.
 - * Analyzed the spatial relationship between structures (locally favored structures) and dynamics (excitations).
- Roskilde University** Department of Science and Environment
Intern, Advisor: Prof. Jeppe Dyre & Prof. Lorenzo Costigliola 2024.08 - 2024.09
 - **Topic:** NVU view on energy polydisperse Lennard-Jones systems (*Lang et. al, PRE (2025)*)
 - * Performed GPU-based MD simulations on high-performance supercomputers to investigate the energy polydisperse Lennard-Jones systems.
 - * Quantified the hidden scale invariance in energy polydisperse systems.
- Institute Curie** Physics of Cells and Cancer (UMR168)
Intern, Advisor: Prof. Pascal Martin & Dr. Carles Blanch Mercader 2025.04 - 2025.06
 - **Topic:** Two-tone interference in a nonlinear model of the ear's cochlea based on critical oscillators
 - * Performed numerical simulations to study basilar membrane displacement under two-tone stimulation.

- * Analyzed the asymmetric behavior in both two-tone suppression and two-tone distortion products.

- **Max Planck Institute for the Physics of Complex Systems** Dresden, Germany
Intern, Advisor: Dr. Ricard Alert & Dr. Ryota Takaki 2025.07 - 2025.08
 - **Topic:** Modeling the Disruption of Aging by Activity in Glassy Active Gels
 - * Studied the impact of binding kinetics on the rheology of active polar gels in the presence of disorder in binding energies, using the trap model as a theoretical framework.
 - * Combined analytical predictions with numerical simulations to investigate how motor activity may prevent aging or disrupt the glassy state of active gels.

HONORS AND AWARDS

- PSL Scholarship, 2023 - 2025
- Outstanding graduates of Zhejiang University, 2023
- First Prize, The Chinese Mathematics Competitions, 2021 & 2020
- Honorable Mention, Mathematical Contest In Modeling Certificate of Achievement, 2021
- First Prize, Zhejiang University Physicists' Tournament, 2021
- Second Prize, National Undergraduate Physics Experiment Competition, 2020
- First Prize, Zhejiang University Scholarship, 2020
- Outstanding Student, 2020

PROFESSIONAL SKILLS

- **Computer Competencies:** Python, C, C++, Matlab
- **Platforms and Tools:** Gromacs, Lammmps, RUMD, Comsol
